

# Nutrient Management Solutions in Times of Drought

## Free online series & Virtual Field Days

Hosted by UC SAREP,  
FarmsReach & Sustainable Conservation

## Join us!

**November  
17-30** Nutrient Management in  
times of drought:  
**Almonds**

Panelists include:

**Tom Rogers**, Almond Grower, Madera, CA  
**Franz Niederholzer**, UCCE Farm Advisor  
**Dan Munk**, UCCE Farm Advisor  
**Bill Green**, Center for Irrigation Technology

**December**  
(dates to be  
announced) Nutrient Management in  
times of drought:

### **Wine Grapes**

**January**  
(dates to be  
announced) Nutrient Management in  
times of drought:

### **Dairy Forage Crops**

**2015** Look for future discussion  
topics throughout 2015

Adapting farm management practices during extreme drought presents new challenges for growers and researchers alike.

Through this online Nutrient Management Solutions series, share your experiences and learn from other farmers, UC Advisors and area experts about maintaining fertile soil and healthy crops during dry weather and limited water availability.

Kicking off November 17, the Nutrient Management Solutions series offers:

- Online presentations or videos by farmers and UC advisors highlighting almonds, wine grapes, and dairy forage crops
- Facilitated online discussion moderated by the series presenters
- New “Soil Nutrient Management Toolkit” in FarmsReach, with practical resource and info sheets.

The online series is part of the [Solution Center for Nutrient Management](#)—a growing resource for nutrient management research and information, online and in-person created by UC SAREP.
